

Data Collection and Preprocessing Phase

Date	4 July2024
Team ID	739684
Project Title	Honey price prediction based on purity
Maximum Marks	2 Marks

Data Collection Plan & Raw Data Sources Identification Template

Elevate your data strategy with the Data Collection plan and the Raw Data Sources report, ensuring meticulous data curation and integrity for informed decision-making in every analysis and decision-making endeavor.

Data Collection Plan Template

Section	Description
Project Overview	The machine learning project aims to predict honey prices based on various influencing factors. Using historical datasets containing features such as production volume, weather conditions, economic indicators, and market demand, the objective is to build a predictive model that accurately forecasts honey prices. This will support stakeholders in making informed decisions and strategies in the honey industry.
Data Collection Plan	Search for datasets related to honey price prediction , and applicant details.
Raw Data Sources Identified	The raw data sources for this project include datasets obtained from Kaggle ,the popular platform for data science competitions and

	repositories. The provided sample data represents a subset of the collected information, encompassing variables such rainfall, temperature.

Source Name	Description	Location/URL	Format	Size	Access Permissions
Kaggle Dataset	The dataset comprises information related to factors influencing honey prices, aimed at predicting market trends. It includes variables that characterize different aspects of honey production and market dynamics:	https://www.kaggle.com/code/stealthtechnologies/honey-dataset-notebook	CSV	15839 kb	Public
